**BIQIVT**  
ELEVATING SCIENCE™

# Welcome to BioIVT

As CEO of BioIVT, I would like to personally introduce you to BioIVT.

I want to take this opportunity to describe BioIVT and its unsurpassed portfolio of products and services to support your scientific programs. Our years of success are due to helping our clients meet and exceed their research objectives.

We at BioIVT pride ourselves on providing an industry-leading portfolio of high-quality biological specimens and value-added services. This has been our focal point as we've rapidly expanded over the past few years. We will continue to listen to you, and bring to market novel technologies to advance scientific discovery.

By combining our technical expertise, exceptional customer service, and unparalleled access to biological specimens, we look forward to serving you a new trusted partner in ELEVATING SCIENCE™.

Sincerely,  
Jeff Gatz, CEO

Services

# ELEVATING SCIENCE™

## Across Multiple Research Areas

### Partners in Science

#### Hepatic ADME-Toxicology Products and Services

As the leading global provider of human and animal hepatocyte and microsome products for *in vitro* research, we offer comprehensive products and services for Hepatic ADME-Tox research. We help researchers accelerate R&D programs, gain regulatory approval, and achieve commercial objectives.

#### Biomarker Discovery

As a researcher, you struggle with high attrition rate based on a lack of clinical efficacy. Look to BioIVT for highly characterized human specimens. We provide custom mutation screening, HLA typing or other custom cohort assignment screens. Our PHASEZERO® Research Services team has expertise in a variety of specialty services and works to provide actionable data to move your research forward.

#### Cell Therapy / Regenerative Medicine

We have a wide range of blood collection methods for immune cells ranging from vacutainer collections, full unit buffy coats, LEUKOMAX™ Leukopaks, and more. Our LEUKOMAX Leukopaks yield an extremely high number of immune cells and stem cells from a single donor, where most are recallable, making it extremely valuable for cell therapy research.

#### Personalized Medicine

At BioIVT, we understand that biomarkers are key to the development of new therapies as well as companion diagnostics. Our team has expertise in the processes required for the ethical acquisition of biospecimens that cover a wide range of samples types and disease states needed for the production of reliable data. We will make sure you get the right samples, from the right donor, to advance your research.

#### Microbiome

BioIVT can help you navigate microbiome collections and determine the best sample collection and preservation protocols to ensure fit-for-purpose specimens for downstream analysis. We can build a custom collection program for your inclusion and exclusion criteria including cohorts by age, gender, race/ethnicity, BMI, dietary restrictions, etc., or any combination of the above across disease and/or normal representative cohorts.

# Quality Samples to Ensure Superior Results

Your research depends on having the right sample at the right time, in the right format and with the right associated clinical data.

The BioIVT Regulatory and Quality Team follows rigorous quality processes conducted in accordance with applicable laws, regulations, and ordinances. We are constantly working to ensure the maximal use of these precious samples, which can lead to new cures and therapies, and ultimately save lives.

## With BioIVT, you have confidence that:

- Biospecimens have been ethically procured
- Our network of collection sites follow IRB-approved protocols
- Your supplier has a superior track record for regulatory audits (including FDA)
- A trusted team of experts is in place to navigate regulatory requirements

## Biospecimens you can trust.
